

CHAINEDPAD

DON'T LAUNCH ALONE. BUILD ON A NETWORK.

A NETWORKED TOKEN LAUNCH & ECONOMIC INFRASTRUCTURE

LITEPAPER v0.2

SEPTEMBER 2026

**“Every token can be connected.
Every connection can create value.”**

PUBLIC CONCEPT DOCUMENT

Early-stage vision · Proposed architecture · Subject to change

1. What Is CHAINEDPAD?

CHAINEDPAD is a proposed token launch and economic infrastructure designed to connect new projects through a shared network.

Instead of treating every token as a completely isolated project, CHAINEDPAD introduces the idea of **connected token ecosystems**.

The goal is to create an environment where launching a new token can also mean joining a broader network of projects.

2. The Vision

CHAINEDPAD aims to build a token ecosystem where projects can connect, grow and potentially create value for the wider network.

The long-term vision is to move from isolated token launches toward an interconnected economic structure.

Don't launch alone. Build on a network.

3. The Problem

Token launches are often isolated from one another. A successful project may generate substantial activity, but that success does not necessarily create a meaningful relationship with other projects.

At the same time, creators are often focused heavily on the launch itself rather than on building a lasting ecosystem.

CHAINEDPAD is exploring a model designed to make the relationship between projects a central part of the launch process.

4. The CHAINEDPAD Concept

At a high level, CHAINEDPAD allows a new project to become connected to an existing project through a **parent-child relationship**.

For example: **CHAIN** → **Project A** → **Project B**.

This creates a network in which projects can be connected to one another rather than existing entirely independently.

The detailed mechanics behind these relationships are intentionally not disclosed at this stage.

5. The Network

As more projects join the ecosystem, the network can expand.

Successful projects may become attractive destinations for future creators, while new projects can add additional connections to the ecosystem.

CHAINEDPAD is designed around the possibility that these connections can create a network effect over time.

6. CHAIN

CHAIN is intended to serve as the foundational asset of the CHAINEDPAD ecosystem and the root of the broader network.

Future protocol mechanisms may use CHAIN across different parts of the ecosystem.

The final tokenomics, supply structure and utility model remain under development.

7. Creator Incentives

CHAINEDPAD aims to create incentives that extend beyond the initial token launch.

The broader objective is to encourage creators to build projects that contribute to an expanding network rather than treating a token launch as an isolated event.

Exact incentive mechanisms will be introduced at a later stage.

8. Protocol Development

CHAINEDPAD is currently an early-stage concept.

Development is expected to progress through research, prototyping, testing and eventually a production-ready protocol.

Technical architecture, economic parameters, security mechanisms and other implementation details will be refined through this process.

9. Roadmap

Research — Validate the economic and technical model.

Prototype — Develop the core network and token infrastructure.

Testnet — Test the system, incentives and network mechanics.

Mainnet — Launch the protocol when the required technical and security conditions are met.

Ecosystem — Expand the network, tools and creator infrastructure.

10. Risks & Disclaimer

CHAINEDPAD is an early-stage project and there is no guarantee that the proposed architecture will be developed, launched or achieve product-market fit.

Blockchain assets and protocols involve significant technical, market, liquidity and regulatory risks.

This litepaper is provided for informational purposes only and does not constitute financial, investment, legal or tax advice.

All concepts, mechanisms, timelines and token-related parameters described or implied by this document may change as development progresses.

11. Closing

CHAINEDPAD is exploring a simple idea:

What if launching a token didn't mean launching alone?

The project aims to turn individual token launches into connected economic relationships and, over time, into a larger network.

The details will come later.

The network starts with the connection.

CHAINEDPAD

DON'T LAUNCH ALONE. BUILD ON A NETWORK.
